

**Submission response to Bournemouth, Dorset and Poole Mineral Sites Plan  
Inspector's Matters, Issues and Questions (MIQs)**

**Session 12**

MIQ nos. 81-82

The sands identified to be Poole Formation which underly the River Terrace is particularly suitable for building sand and mortar sand application that are particularly demanded by the construction sector which accounts for the larger volume of demand for construction materials. The overlying River Terrace deposits tend to be favoured for other aggregates applications such as concrete manufacture, drainage etc.
