

**Submission response to Bournemouth, Dorset and Poole Mineral Sites Plan  
Inspector's Matters, Issues and Questions (MIQs)**

**Session 3**

MIQ no.28

A preliminary Phase 1 ecological report was prepared in 2016 which did not identify anything of immediate significance or unexpected. Further ecological surveys will be undertaken at the time of submission of a planning application.

MIQ no. 29

Sites AS 25 and AS26 do not fall within zone of influence of European sites and therefore no need for hydrological assessment at this stage of the LP site allocation process. We note that the Environment Agency has not raised objection on this issue for AS25 or AS26 and has indicated hydrological assessments should be carried out at the planning application stages.
